

Comparison of register based employment numbers in the capital region for the third quarter of 2019 and 2020

Change (%) July 2019 to 2020

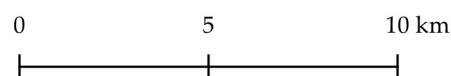

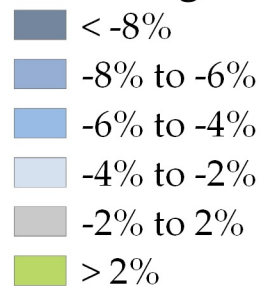

Change (%) August 2019 to 2020

Change (%) September 2019 to 2020

Percentage change

The map scale is 1:200,000 and the overview map scale is 1:15,000,000 on A4. Codes shown on the maps indicate post code areas. The map shows geodata from The National Survey of Iceland and statistical units from Statistics Iceland. While it may appear that there is overlap between the categories displayed on the map, this is misleading. Percentage changes are calculated with 18 decimal places. Whole numbers are therefore profoundly rare, but are included in the category displaying less change.
